## DETAILED ACTION

### *Claim Objections*

1. **Claims 2-3 and 11-12** are objected to because of the following informalities:  
On claims 2-3 and 11-12, "then" after "other" should be changed to – than --.  
Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:  
  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. ***Claims 1-3 and 10-12 rejected under 35 U.S.C. 112, second paragraph***, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. On claims 1 and 10, "a calibration gain for a photosensor corresponding to the line is normal" is vague. What does the *normal* calibration gain mean? Clarification is required. On claims 2-3 and 11-12, "an image intensity measurement for each photosensor, physically corresponding to the particular photosensor" is vague and confusing. It is unclear how an image intensity measurement is *physically corresponding to* the particular photosensor. Clarification is required. Also, on claims 2-3, "all line-arrays in the photosensor assembly" lacks antecedent basis.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. ***Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Palcic et al. (Patent No. US 6,026,174).***

Referring to claim 3, Palcic et al. shows in Fig. 2B the following steps of

Applicant's claim:

a) determining (72) that intensity data, from a particular photosensor, in a particular line-array of photosensors, in a photosensor assembly, is less than a predetermined intensity threshold (Col. 6, lines 5-7); and

b) determining (72) that intensity data, for each photosensor, physically corresponding to the particular photosensor, in all line-arrays in the photosensor assembly other than the particular line-array of photosensors, is not less than the predetermined intensity threshold (Col. 6, lines 5-7).

***Allowable Subject Matter***

6. **Claims 4-5 and 13-14** would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
